

Release Notes

Prism Suite® 14.0.2

Prepared by the Product Management Team at New Boundary Technologies® for release with versions 14.0.2.306 and 14.0.2.356. This is a minor maintenance release.

[System Requirements for Prism Suite 14.0.2](#)

Prism Suite 14.0.2.306 and 14.0.2.356 are minor releases containing some Console enhancements and other minor fixes.

Customer-requested product enhancements

1. Windows 10 is now correctly recognized on the Managed Computers tab/Operating System field and when using OSRevision to define a configuration group.
2. You can now edit a Task's properties from the Task Assignments tab.
3. The License Units tree in Prism Asset Manager now includes License Status and has subfolders for Compliant, Noncompliant and Unmanaged software. These subfolders are auto-populated.
4. The Network tab's tree view now has a right-click option to display only unmanaged computers in any or all containers.
5. You now receive a warning if you inadvertently enter an incorrect IP address or range when creating a network scan configuration.

Minor bug fixes

1. The Tasks tree is now organized more clearly and consistently.
2. The cause of SQL error "The statement has been terminated..." when switching between channels has been fixed.
3. It's no longer possible to inadvertently create a task to run on system startup without also allowing the task to run unattended.
4. Network discovery scan now does a better job of correctly identifying certain printers.
